ANAS MOHAMMED RIZA

Full Stack Developer | Software Engineer | React Native Developer

Colombo, Sri Lanka or Remote or Hybrid | +94 75 412 1698 | rizanas0526rz@gmail.com

Portfolio | GitHub | LinkedIn

PROFESSIONAL SUMMARY

Software Engineering graduate (BEng (Hons), First Class Honours, London Metropolitan University, 2026) and Full Stack Developer with six months of professional experience as a Frontend Developer Intern at FocalDive. Skilled in React.js, Next.js, TypeScript, Node.js, Express.js, React Native (Expo), and RESTful API design, with databases including PostgreSQL, Supabase, MongoDB, MySQL, and SQL Server, alongside C# / .NET. Built and deployed end-to-end web and mobile applications, including a Supabase-backed real estate Android app with Clerk authentication and Row Level Security, an AI-powered fitness planner, a rate-limited MERN notes application on Vercel, and a transactional inventory system. Experienced with JWT and BCrypt authentication, Git, Agile workflows, and cloud deployment. Open to Full Stack Developer, Software Engineer, and React Native Developer roles (on-site in Colombo, remote, or hybrid), seeking to build reliable, secure products within a collaborative engineering team.

EDUCATION

BEng (Hons) in Software Engineering — First Class Honours **2026**
London Metropolitan University (awarded via ESoft Metro Campus, Sri Lanka)

Pearson BTEC Higher National Diploma (HND) in Computing (Software Engineering) **2025**
ESoft Metro Campus

G.C.E. Advanced Level — Engineering Technology **2022**
Zahira National College, Puttalam

G.C.E. Ordinary Level **2019**
Zahira National College, Puttalam

PROFESSIONAL EXPERIENCE

FocalDive **March 2025 – September 2025**
Frontend Developer Intern

- Independently built BookMyPlay.lk, a live online turf booking platform, from UI design through to production, using Next.js, TypeScript, Tailwind CSS, and Shadcn UI.
- Built responsive, production-facing web interfaces by developing with Next.js, TypeScript, Tailwind CSS, and Shadcn UI.
- Translated UI/UX mockups into reusable, accessible components by partnering closely with designers and senior developers.
- Improved application stability and load performance by diagnosing and resolving frontend bugs.
- Delivered end-to-end functionality by integrating frontend interfaces with backend REST APIs.
- Maintained code quality and team alignment by working within an Agile team using Git-based version control and code review workflows.

PROJECTS

AI Gym Planner — Full-Stack AI Fitness Application
Next.js, TypeScript, Tailwind CSS, shadcn/ui, Neon PostgreSQL, Auth.js, Gemini AI, Resend / Live-link / github-repo

- Implemented user authentication and email OTP verification, plus fitness profile create, read, update, and delete (CRUD) functionality.
- Integrated Gemini AI to generate personalized workout plans and implemented workout plan saving and workout history features.
- Implemented workout plan saving and workout history features, allowing users to access their previously generated plans.

Mine Estate — Full-Stack Real Estate Mobile App
React Native, Expo, Expo Router, TypeScript, NativeWind, Zustand, Supabase (PostgreSQL, Storage), Clerk, EAS Build / APK Download

- Built a real estate listings app with React Native, Expo Router, and TypeScript, featuring property search and filtering, a swipeable multi-photo gallery, and saved favourites synced to the database with Zustand.
- Secured the app with Clerk authentication (email OTP verification and protected routes) and Row Level Security on Supabase PostgreSQL using Clerk JWTs, so users can only create, edit, or delete their own listings and photos.
- Delivered full listing management (create, edit, delete) with multi-image upload to Supabase Storage, reusing one form component for add and edit and cleaning up orphaned images on failure.
- Improved user experience with call and WhatsApp contact buttons, light, dark, and system themes, toast notifications, skeleton loaders, and empty states.

Inventory Management System — Desktop Application

C#, .NET, Windows Forms, SQL Server, T-SQL, ADO.NET, BCrypt, Git / https://lnkd.in/p/gJimvx6G

- Built a full desktop inventory system covering users, categories, products, customers, orders, and invoicing, backed by a relational SQL Server database with foreign keys and JOIN-based queries.
- Kept stock accurate by processing orders inside SQL transactions with commit/rollback, and supported order cancellation that restores stock while preserving the order record.
- Secured authentication with BCrypt password hashing (including automatic upgrade of legacy hashes), role-based access control, and parameterized queries to prevent SQL injection.
- Delivered a dashboard (orders, total spend, and last order date per customer, low-stock alerts), a date-range sales report with top-selling products, multi-page invoice printing, and one-click database backup.

Notes API — RESTful Backend Service

Node.js, Express.js, MySQL, REST API, dotenv, Git | github.com/Anasriza26/notes-api

- Developed a REST API with full CRUD endpoints and a health check, using Express 5 and a MySQL connection pool.
- Ensured data integrity and security with request validation, parameterized queries, and environment-based configuration that keeps credentials out of source control.
- Improved reliability with centralized error handling that returns accurate HTTP status codes (400, 404, 503, 500) and request logging middleware.

ThinkBoard — Full-Stack MERN Notes Application

Next.js, React.js, Node.js, Express.js, MongoDB, Mongoose, Tailwind CSS, DaisyUI, Axios, Upstash Redis, Vercel | Live: https://riza-notes-app.vercel.app/

- Built a full-stack notes application with complete CRUD functionality, using a Next.js (App Router) frontend and a Node.js / Express.js REST API structured into routes, controllers, and models, with data stored in MongoDB Atlas through Mongoose.
- Protected the API from abuse by implementing sliding-window rate limiting with Upstash Redis, and handled the 429 response in the interface with a clear rate-limit message.
- Delivered a responsive interface with loading, empty, and error states, toast notifications, and instant updates after create and delete, using React hooks, Axios, Tailwind CSS, and DaisyUI.
- Deployed the frontend and backend as separate Vercel projects with Git-based continuous deployment, and resolved production issues including CORS configuration and environment-variable misconfiguration.

Noir Étude — Luxury Fashion E-Commerce Website

Next.js, React.js, Supabase,PostgreSql, Tailwind CSS, TypeScript, Shadcn UI, Vercel | Live: noir-etude.vercel.app

- Delivered a polished, modern shopping experience by designing and building a responsive e-commerce site with reusable React/Next.js components.
- Ensured a consistent experience across devices by optimizing layouts and load performance for desktop, tablet, and mobile, then deploying to production on Vercel.

City Timber — Premium Timber & Construction Materials Website

Next.js, React.js, TypeScript, Tailwind CSS, Shadcn UI, GSAP, Lucide React, Vercel | Live: city-timber.vercel.app

- Designed and developed a modern, responsive business website for City Timber, presenting its timber products, professional services, company background, and customer contact information through a clean, premium visual experience.
- Enhanced the website with interactive GSAP animations, including cinematic page-load transitions, scroll-triggered section reveals, staggered card animations, hover interactions, animated statistics, and smooth mobile navigation effects to create a polished user experience.

CERTIFICATIONS

- English Speaking & Listening — Open University of Sri Lanka, Puttalam

SKILLS

Languages: JavaScript (ES6+), TypeScript, C#, SQL (T-SQL),Python
Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, Shadcn UI, GSAP
Backend & APIs: Node.js, Express.js, .NET, ADO.NET, REST API Design, Middleware, Rate Limiting, CORS
Desktop: C# Windows Forms
Mobile: React Native, Expo, Expo Router, NativeWind, Zustand
Databases: PostgreSQL, Supabase, SQL Server, MySQL, MongoDB, Mongoose, Firebase Firestore, Neon, Upstash Redis
Authentication & Security: Clerk, Auth.js, Firebase Authentication, JWT, BCrypt, Row Level Security (RLS), Parameterized Queriess
Cloud & Deployment: Vercel, EAS Build, Git-based Continuous Deployment
Tools & Platforms: Git, GitHub, VS Code, Visual Studio, Android Studio, Postman, SSMS, pgAdmin, Thunder Client, Figma
AI Integration: Gemini API
Methodologies: Agile, Code Review, Version Control Workflows
Design & Media: Figma, Canva, DaVinci Resolve, CapCut
Productivity: Microsoft Word, Excel, PowerPoint, Google Sheets

Core Strengths: Problem Solving, Analytical Thinking, Communication, Adaptability, Team Collaboration, Self Motivation
